Alternative Solvents for Green Chemistry (RSC Green Chemistry Series) By Francesca M. Kerton

Conventional solvents can be hazardous in terms of toxicity, flammability and waste generation. Consequently, alternative solvents now form a substantial part of green chemistry. This book covers the latest developments in this growing field as well as some key areas that have been overlooked in previous literature. Solvents are important in many areas of chemistry so the author has adopted a general approach encompassing of a wide range of solvents. As part of the Green Chemistry Series, examples are used that tie in with the 12 principles of green chemistry such as atom efficient reactions in benign solvents, processing of renewable chemicals and materials in green solvents.

Editorial Review

Review

"provides a very good introduction to potentially green alternative solvents for researchers new to the field...excellent starting point for those interested in working with green alternative solvents" (*JACS*, 131, 12016 - 12016")

From the Back Cover

Green chemistry, as a relatively new sub-discipline, is a rapidly growing field of research. Alternative solvents - including supercritical fluids and room temperature ionic liquids - form a significant portion of research in green chemistry. This is in part due to the hazards of many conventional solvents (e.g. toxicity and flammability) and the significant contribution that solvents make to the waste generated in many chemical processes. Solvents are important in analytical chemistry, product purification, extraction and separation technologies, and also in the modification of materials. Therefore, in order to make chemistry more sustainable in these fields, a knowledge of alternative, greener solvents is important. This book, which is part of a green chemistry series, uses examples that tie in with the 12 principles of green chemistry e.g. atom efficient reactions in benign solvents and processing of renewable chemicals/materials in green solvents. Readers get an overview of the many different kinds of solvents, written in such a way to make the book appropriate to newcomers to the field and prepare them for the 'green choices' available. In addition, it includes some cutting-edge results from the recent literature to give a clearer picture of where green solvents are today. The book also removes some of the mystique associated with 'alternative solvent' choices and includes information on solvents in different fields of chemistry such as analytical and materials chemistry in addition to catalysis and synthesis. The latest research developments, not covered elsewhere, are included such as switchable solvents and biosolvents. Also, some important areas that are often overlooked are described such as naturally sourced solvents (including ethanol and ethyl lactate) and liquid polymers (including poly(ethyleneglycol) and poly(dimethylsiloxane)). As well as these additional alternative solvents being included, the book takes a more general approach to solvents, not just focusing on the use of solvents in synthetic chemistry. Applications of solvents in areas such as analysis are overviewed in addition to the more widely recognised uses of alternative solvents in organic synthesis. The book is aimed at newcomers to the field whether research students beginning investigations towards their thesis or industrial researchers curious to find out if an alternative solvent would be suitable in their work.

About the Author

Francesca M Kerton is Assistant Professor (Green Chemistry) in the Department of Chemistry, Memorial University of Newfoundland, Canada. She gained her BSc in Chemistry with Environmental Science at the University of Kent and her PhD in Chemistry at the University of Sussex. For 2 years she was a Postdoctoral Fellow at the University of British Columbia in Canada followed by a Lecturer, then Royal Society University Research Fellow, at the University of York, UK. She has contributed to many books and journal articles and her research interests are green chemistry including solvent replacement, catalysis and renewable feedstocks.

Users Review

From reader reviews:

Angela Smith:

A lot of people always spent their very own free time to vacation or maybe go to the outside with them family members or their friend. Do you realize? Many a lot of people spent many people free time just watching TV, or perhaps playing video games all day long. In order to try to find a new activity honestly, that is look different you can read any book. It is really fun for you. If you enjoy the book that you just read you can spent all day long to reading a e-book. The book Alternative Solvents for Green Chemistry (RSC Green Chemistry Series) it is quite good to read. There are a lot of those who recommended this book. They were enjoying reading this book. When you did not have enough space to deliver this book you can buy often the e-book. You can m0ore quickly to read this book from the smart phone. The price is not to fund but this book possesses high quality.

Maria Ives:

You can spend your free time to learn this book this publication. This Alternative Solvents for Green Chemistry (RSC Green Chemistry Series) is simple to develop you can read it in the park your car, in the beach, train and soon. If you did not get much space to bring the actual printed book, you can buy often the e-book. It is make you quicker to read it. You can save the particular book in your smart phone. So there are a lot of benefits that you will get when one buys this book.

Rodney Hussey:

Many people spending their time by playing outside using friends, fun activity using family or just watching TV the whole day. You can have new activity to shell out your whole day by reading a book. Ugh, ya think reading a book can really hard because you have to accept the book everywhere? It all right you can have the e-book, taking everywhere you want in your Smart phone. Like Alternative Solvents for Green Chemistry (RSC Green Chemistry Series) which is obtaining the e-book version. So , try out this book? Let's notice.

Edda Allen:

Many people said that they feel fed up when they reading a guide. They are directly felt that when they get a half elements of the book. You can choose the actual book Alternative Solvents for Green Chemistry (RSC Green Chemistry Series) to make your own personal reading is interesting. Your personal skill of reading proficiency is developing when you just like reading. Try to choose simple book to make you enjoy to read it and mingle the feeling about book and looking at especially. It is to be 1st opinion for you to like to available a book and learn it. Beside that the guide Alternative Solvents for Green Chemistry (RSC Green Chemistry Series) can to be your friend when you're really feel alone and confuse with the information must you're doing of the time.
