

Real Time Data Mining

By Saed Sayad

Real Time Data Mining By Saed Sayad

Data mining is about explaining the past and predicting the future by exploring and analyzing data. Data mining is a multi-disciplinary field which combines statistics, machine learning, artificial intelligence and database technology. Although data mining algorithms are widely used in extremely diverse situations, in practice, one or more major limitations almost invariably appear and significantly constrain successful data mining applications. Frequently, these problems are associated with large increases in the rate of generation of data, the quantity of data and the number of attributes (variables) to be processed: Increasingly, the data situation is now beyond the capabilities of conventional data mining methods. The term Real Time is used to describe how well a data mining algorithm can accommodate an ever increasing data load instantaneously. Upgrading conventional data mining to real time data mining is through the use of a method termed the Real Time Learning Machine or RTLM. The use of the RTLM with conventional data mining methods enables Real Time Data Mining. The future of predictive modeling belongs to real time data mining and the main motivation in authoring this book is to help you to understand the method and to implement it for your applications.

Editorial Review

Users Review

From reader reviews:

Robin Martz:

Nowadays reading books be a little more than want or need but also get a life style. This reading habit give you lot of advantages. The benefits you got of course the knowledge the rest of the information inside the book that improve your knowledge and information. The information you get based on what kind of e-book you read, if you want get more knowledge just go with schooling books but if you want experience happy read one together with theme for entertaining including comic or novel. Typically the Real Time Data Mining is kind of e-book which is giving the reader erratic experience.

George Hartzell:

Are you kind of stressful person, only have 10 or perhaps 15 minute in your time to upgrading your mind expertise or thinking skill perhaps analytical thinking? Then you have problem with the book when compared with can satisfy your small amount of time to read it because all this time you only find book that need more time to be study. Real Time Data Mining can be your answer as it can be read by anyone who have those short free time problems.

Scott Anderson:

You are able to spend your free time to study this book this e-book. This Real Time Data Mining is simple to create you can read it in the park, in the beach, train and soon. If you did not have much space to bring often the printed book, you can buy the actual e-book. It is make you quicker to read it. You can save typically the book in your smart phone. So there are a lot of benefits that you will get when you buy this book.

Aaron Edgington:

What is your hobby? Have you heard this question when you got pupils? We believe that that problem was given by teacher for their students. Many kinds of hobby, Everyone has different hobby. So you know that little person including reading or as looking at become their hobby. You need to know that reading is very important and book as to be the point. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You find good news or update concerning something by book. A substantial number of sorts of books that can you decide to try be your object. One of them is actually Real Time Data Mining.
