Editorial Review

Review

"Solving Problems That Matter is well worth the time it takes to read and the modest expense of procuring this extremely valuable book."

- National Career Development Association (NCDA)

"I have many students come to me seeking advice about non-traditional careers that directly impact the big problems facing the world. I often start the conversation by saying, 'It's complicated.' Professor Mehta's book is now my first recommendation to them and to faculty interested in helping students like them find their path. The book helps all readers understand the challenges and possibilities of careers that can make a difference globally."

- Tom Brumm, ASABE Resource Magazine

"Overall, this book gives one the experience of a really productive networking event, providing exposure to a variety of key players in the STEM world and their individual career trajectories, and offering insights into some of the many possible paths one can take with a socially conscious viewpoint and strong skills in STEM."

- National Association of Colleges and Employers (NACE)

"... reading the biographies of STEM career professionals could be really inspiring--these are real people with real life stories. Within their profiles they cover not only the field but their interests and preparation. This would help students determine if this or that career might be suitable for them."

- National Science Teachers Association (NSTA)

"For newcomers to the field it is tough to find work in product design and technology for global development. The best advice is usually that it's hard and you should try to make your own job and launch a start-up or non-profit. But this book now offers a better response. It doesn't shy from the truth that breaking into the field is hard, instead it offers a map for job seekers. It's practical, comprehensive and shares some of the interesting new and known voices in the field."

- Engineering For Change

About the Author

Khanjan Mehta is the Founding Director of the Humanitarian Engineering and Social Entrepreneurship (HESE) Program and Assistant Professor of Engineering Design at Penn State. Mehta has led technology-based social ventures related to food security and global health in Kenya, Tanzania, India, Sierra Leone, Mozambique and other countries.

Users Review
