

Dictionary of Stem Cells, Regenerative Medicine, and Translational Medicine

By Frank J. Dye

Dictionary of Stem Cells, Regenerative Medicine, and Translational Medicine By Frank J. Dye

Stem cells, regenerative medicine, and translational medicine, are all areas of burgeoning basic research and clinical application.

This dictionary includes the fundamental terminology of each of these areas, the major discoveries and significant scientists that comprise the history and current development of the field, as well as a number of concepts. The vocabulary is presented within the broader lexicon of developmental biology and embryology, which provides context for these three fields. Topics covered range from stem cells (embryonic, adult, and iPSCs) to teratology. The inclusion of extensive cross-referencing of the terms will enable readers to broaden their understanding of them.

The Dictionary of Stem Cells, Regenerative Medicine, and Translational Medicine will provide both the basic background terminology needed by pre-health professions/biology major undergraduate students and early-stage graduate students, as well as being a valuable reference for university professors, researchers and peers in related disciplines.
