Who This Book Is For

If you are a mobile application evangelist, mobile application developer, information security practitioner, penetration tester on infrastructure web applications, an application security professional, or someone who wants to learn mobile application security as a career, then this book is for you. This book will provide you with all the skills you need to get started with Android and iOS pen-testing.

What You Will Learn

- Gain an in-depth understanding of Android and iOS architecture and the latest changes
 - Discover how to work with different tool suites to assess any application
 - Develop different strategies and techniques to connect to a mobile device
 - Create a foundation for mobile application security principles
 - Grasp techniques to attack different components of an Android device and the different functionalities of an iOS device
 - Get to know secure development strategies for both iOS and Android applications
 - Gain an understanding of threat modeling mobile applications
 - Get an in-depth understanding of both Android and iOS implementation vulnerabilities and how to provide counter-measures while developing a mobile app
- In Detail Mobile security has come a long way over the last few years. It has

transitioned from "should it be done?" to "it must be done!" Alongside the growing number of devices and applications, there is also a growth in the volume of Personally identifiable information (PII), Financial Data, and much more. This data needs to be secured. This is why Pen-testing is so important to modern application developers. You need to know how to secure user data, and find vulnerabilities and loopholes in your application that might lead to security breaches. This book gives you the necessary skills to security test your mobile applications as a beginner, developer, or security practitioner. You'll start by discovering the internal components of an Android and an iOS application. Moving ahead, you'll understand the inter-process working of these applications. Then you'll set up a test environment for this application using various tools to identify the loopholes and vulnerabilities in the structure of the applications. Finally, after collecting all information about these security loop holes, we'll start securing our applications from these threats.
