

Understanding Earth 7e

By John Grotzinger

Understanding Earth 7e By John Grotzinger

For the introductory geology or physical geology course. Understanding Earth offers both majors and non-majors rock solid content that originated with the ground-breaking text, Earth. In subsequent editions, the text has consistently met the needs of today's students with exceptional content, currency, interactive learning features, and an overall focus of the role of geological science in our lives. Understanding Earth doesn't merely present the concepts and processes of physical geology—the authors focus on how we know what we know. Students actively take part in the scientific process of discovery and learn through experience as they explore the impact of geology on their lives as citizens and future stewards of the planet. The new edition incorporates coverage of recent natural disasters (the 2011 tsunami), fracking and other natural resources issues, the latest developments in climate change, and key events such as the Mars mission and the arrest of geologists in Italy.

Editorial Review

About the Author

John Grotzinger is a field geologist interested in the evolution of the Earth's surface environments and biosphere. His research addresses the chemical development of the early oceans and atmosphere, the environmental context of early animal evolution, and the geologic factors that regulate sedimentary basins. He has contributed to developing the basic geologic framework of a number of sedimentary basins and orogenic belts in northwestern Canada, northern Siberia, southern Africa, and the western United States. He received his B.S. in geoscience from Hobart College in 1979, an M.S. in geology from the University of Montana in 1981, and a Ph.D. in geology from Virginia Polytechnic Institute and State University in 1985. He spent three years as a research scientist at the Lamont-Doherty Geological Observatory before joining the MIT faculty in 1988. From 1979 to 1990, he was engaged in regional mapping for the Geological Survey of Canada. He currently works as a geologist on the Mars Exploration Rover team, the first mission to conduct ground-based exploration of the bedrock geology of another planet, which has resulted in the discovery of sedimentary rocks formed in aqueous depositional environments. In 1998, Dr. Grotzinger was named the Waldemar Lindgren Distinguished Scholar at MIT, and in 2000 he became the Robert R. Schrock Professor of Earth and Planetary Sciences. In 2005, he moved from MIT to Caltech, where he is the Fletcher Jones Professor of Geology. He received the Presidential Young Investigator Award of the National Science Foundation in 1990, the Donath Medal of the Geological Society of America in 1992, and the Henno Martin Medal of the Geological Society of Namibia in 2001. He is a member of the American Academy of Arts & Sciences and the U.S. National Academy of Sciences. **Thomas H. Jordan** is director of the Southern California Earthquake Center, University Professor, and W. M. Keck Foundation Professor of Earth Sciences at the University of Southern California. As SCEC's principal investigator since 2002, he has overseen all aspects of its program in earthquake system science, which currently involves over 600 scientists at more than 60 universities and research institutions worldwide (<http://www.scec.org>). The center's mission is to develop comprehensive understanding of earthquakes and use this scientific knowledge to reduce earthquake risk. Jordan established SCEC's Collaboratory for the Study of Earthquake Predictability and has been the lead SCEC investigator on projects to create and improve a time-dependent, uniform California earthquake rupture forecast. He currently chairs the International Commission on Earthquake Forecasting for Civil Protection (appointed by the Italian government), is a member of the California Earthquake Prediction Evaluation Council, and has served on the Scientific Earthquake Studies Advisory Committee of the U. S. Geological Survey. He was elected to the Council of the U. S. National Academy of Sciences in 2006 and has served on its executive committee. He was appointed to the Governing Board of the National Research Council in 2008. Jordan's research is focused on system-level models of earthquake processes, earthquake forecasting and forecast-evaluation, and full-3D waveform tomography. His other interests include continental formation and tectonic evolution, mantle dynamics, and statistical descriptions of geologic phenomena. He is an author on approximately 190 scientific publications, including two popular textbooks. He chaired the NRC panels that produced two decadal reports, *Living on an Active Earth: Perspectives on Earthquake Science* (2003) and *Basic Research Opportunities in Earth Sciences* (2002). Jordan received his B.A., M.S., and Ph.D. (1972) from the California Institute of Technology. He taught at Princeton University and the Scripps Institution of Oceanography before joining the Massachusetts Institute of Technology (MIT) as the Robert R. Shrock Professor in 1984. He served as the head of MIT's Department of Earth, Atmospheric and Planetary Sciences for the decade 1988-1998. In 2000, he moved from MIT to USC, and in 2004, he was appointed as a USC University Professor. He has been awarded the Macelwane and Lehmann Medals of the American Geophysical Union and the Woollard Award of the Geological Society of America. He is an elected member of the National Academy of Sciences,

the American Academy of Arts and Sciences, and the American Philosophical Society.

Users Review

From reader reviews:

David Ramos:

With other case, little individuals like to read book Understanding Earth 7e. You can choose the best book if you like reading a book. As long as we know about how is important the book Understanding Earth 7e. You can add knowledge and of course you can around the world by way of a book. Absolutely right, because from book you can know everything! From your country right up until foreign or abroad you may be known. About simple point until wonderful thing you may know that. In this era, you can open a book as well as searching by internet system. It is called e-book. You can utilize it when you feel bored stiff to go to the library. Let's read.

Ladonna Warren:

The book Understanding Earth 7e gives you the sense of being enjoy for your spare time. You should use to make your capable far more increase. Book can for being your best friend when you getting stress or having big problem using your subject. If you can make reading through a book Understanding Earth 7e for being your habit, you can get more advantages, like add your current capable, increase your knowledge about some or all subjects. You could know everything if you like open up and read a guide Understanding Earth 7e. Kinds of book are several. It means that, science e-book or encyclopedia or some others. So , how do you think about this publication?

Suzanne Mitchell:

This Understanding Earth 7e usually are reliable for you who want to be described as a successful person, why. The reason why of this Understanding Earth 7e can be one of many great books you must have is actually giving you more than just simple examining food but feed you with information that might be will shock your before knowledge. This book is usually handy, you can bring it almost everywhere and whenever your conditions in the e-book and printed ones. Beside that this Understanding Earth 7e forcing you to have an enormous of experience including rich vocabulary, giving you tryout of critical thinking that we realize it useful in your day pastime. So , let's have it appreciate reading.

Melissa Broussard:

Don't be worry in case you are afraid that this book will probably filled the space in your house, you might have it in e-book technique, more simple and reachable. This specific Understanding Earth 7e can give you a lot of good friends because by you checking out this one book you have point that they don't and make a person more like an interesting person. This kind of book can be one of one step for you to get success. This reserve offer you information that possibly your friend doesn't know, by knowing more than different make

you to be great individuals. So , why hesitate? We need to have Understanding Earth 7e.
