Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age By Michael A. Hiltzik

Dealers of Lightning is the riveting story of the legendary Xerox PARC--a collection of eccentric young inventors brought together by Xerox Corporation at a facility in Palo Alto, California, during the mind-blowing intellectual ferment of the seventies and eighties. Here for the first time Michael Hiltzik, a correspondent for the *Los Angeles Times*, reveals in piercing detail the true story of the extraordinary group that aimed to bring about a technological dawn that would change the world--and succeeded.

Based on extensive interviews with the scientists, engineers, administrators, and corporate executives who lived the story, *Dealers of Lightning* takes the read on a journey from PARC's beginnings in a dusty, abandoned building at the edge of the Stanford University campus to its triumph as a hothouse of ideas that spawned not only the first personal computer, but the windows-style graphical user interface, the laser printer, much of the indispensable technology of the Internet, and a great deal more. It shows how and why Xerox, despite its willingness to grant PARC unlimited funding and the responsibility for developing breakthroughs to keep the corporation on the cutting edge of office technology, remained forever unable to grasp (and, consequently, exploit) the innovations that PARC delivered--and it details the increasing frustration of the original PARC scientists, many of whom would go on to build their fortunes upon the very ideas Xerox so rashly discarded.

More than just a riveting historical narrative, *Dealers of Lightning* brings to life an unforgettable cast of characters. Among them:

- Bob Taylor--the preacher's son from rural Texas who would be considered a prophet by some and a cantankerous egomaniac by others, whose fearless (and feared) leadership of a team of computer renegades made them the heroes of the embryonic Silicon Valley;
- Jack Goldman--the Xerox chief scientist who convinced the stolid corporation to stake tens of millions of dollars on PARC while warning that the investment might not pay off for years--if it paid off at all;
- Alan Kay--PARC's creative and philosophical soul, who suffered years of ridicule for envisioning a computer that could be tucked under the arm yet would contain the power to store books, symphonies, letters, poems, and

drawings--until he arrived at Palo Alto and met the people who would build it; and

- Steve Jobs--who, aided by Xerox's indifference to PARC's most momentous inventions, staged a daring raid to obtain the technology that would end up at the heart of the Macintosh: the machine that for a time helped Apple dominate an explosive new market.

Dealers of Lightning is an unprecedented look at the ideas, the inventions, and the individuals that propelled Xerox PARC to the frontier of technohistory--and the corporate machinations that almost prevented it from achieving greatness.

Editorial Review

Amazon.com Review

Throughout the '70s and '80s, Xerox Corporation provided unlimited funding to a renegade think tank called the Palo Alto Research Center (PARC). Occupying a ramshackle building adjacent to Stanford University, PARC's occupants would prove to be the greatest gathering of computer talent ever assembled: it conceptualized the very notion of the desktop computer, long before IBM launched its PC, and it laid the foundation for Microsoft Windows with a prototype graphical user interface of icons and layered screens. Even the technology that makes it possible for these words to appear on the screen can trace its roots to Xerox's eccentric band of innovators. But despite PARC's many industry-altering breakthroughs, Xerox failed ever to grasp the financial potential of such achievements. And while Xerox's inability to capitalize upon some of the world's most important technological advancements makes for an interesting enough story, *Los Angeles Times* correspondent Michael Hiltzik focuses instead on the inventions and the inventors themselves. We meet fiery ringleader Bob Taylor, a preacher's son from Texas known as much for his ego as for his uncanny leadership; we trace the term "personal computer" back to Alan Kay, a visionary who dreamed of a machine small enough to tuck under the arm; and we learn how PARC's farsighted principles led to collaborative brilliance. Hiltzik's consummate account of this burgeoning era won't improve Xerox's stake in the computer industry by much, but it should at least give credit where credit is due. Recommended.

--Rob McDonald

From Publishers Weekly

Anyone who uses a personal computer is familiar with technologies pioneered by Xerox's Palo Alto Research Center (PARC), which started operation in 1970. The received wisdom is that Xerox muffed the chance to dominate the personal computer era by allowing revolutionary technologies developed at PARC to be snatched up by strangers and rivals (most famously, Apple, which took the mouse and the graphical user interface from PARC). L.A. Times reporter Hiltzik argues that the received wisdom is wrong. He expertly situates the story of which products actually made it to market for Xerox (e.g., the laser printer) and which technologies Xerox leaked away (WYSIWYG word processing, hypertext, Ethernet and TCP/IP, to name a few) in a broader analysis of the role of basic science research in business. He praises Xerox execs for understanding the difference between basic research and product development and for exempting PARC from the stultifying effect of having to do the latter. Among the many facts of life on the cutting edge that Hiltzik makes abundantly clear is that very bad decisions are often made for very good business reasons. While granting that Xerox could certainly have better exploited the new technologies issuing from PARC, he emphasizes that the company brought together "a group of superlatively creative minds at the very moment when they could exert maximal influence on a burgeoning technology, and financed their work with unexampled generosity." This is a top-notch business page-turner. Unburdened by any gee-whiz jaw-dropping, yet fully appreciative of the power of creative minds, it is informed by a sure understanding of the complex relationship between business and technology. From Kirkus Reviews

In the late 1960s, Xerox founded a research center at Palo Alto, Calif. In time, that facility, known as PARC, became ground zero of the computer revolution, as recounted here. In the dinosaur era of computing, a typical machine filled a large room and was shared by dozens of researchers. Los Angeles Times editor Hiltzik (*A Death in Kenya: The Murder of Julie Ward*, 1991) credits Robert W. Taylor, who assembled the PARC team, with changing that. Taylor's field was psychology, not engineering; but his vision of the

computer as a communications device was a radical departure. He got his chance to realize it when Xerox's chief scientist Jacob Goldman persuaded his superiors to launch a basic research facility along the line of AT&T's famed Bell Labs. Xerox management, more interested in marketable products than in pure science, nearly killed the center before it opened. But Taylor gradually built his team of young computer hotshots, and the innovations flowed: mouse, Ethernet, even the term "personal computer." By 1973, a team led by Chuck Thacker had created Alto, a computer small enough to fit under a desk. Its first program displayed an animated graphic as a test of the user interface: Cookie Monster, from Sesame Street. Two years later, Xerox was selling a mail-order computer kit called Altair 8800 one of which inspired a young hobbyist named Bill Gates. But except for the laser printer, Xerox consistently failed to exploit PARC's innovations. Instead, the company pushed the Star workstation, released in 1981. Within six months, IBM had released its first PC, and the Star was obsolete. Meanwhile, Microsoft and Apple Computer (both of which appropriated their design philosophy from PARC) were on the rise. Hiltzik focuses on the human dimensions of the story, taking full advantage of the rich cast of characters involved in earth-shaking developments. A compulsively readable account of perhaps the most important technological undertaking since the Manhattan Project. Highly recommended. (Author tour) -- *Copyright ©1999, Kirkus Associates, LP. Users Review

From reader reviews:

Martha McKee:

The book Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age give you a sense of feeling enjoy for your spare time. You may use to make your capable a lot more increase. Book can to be your best friend when you getting strain or having big problem using your subject. If you can make reading through a book Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age to become your habit, you can get much more advantages, like add your own personal capable, increase your knowledge about a few or all subjects. You could know everything if you like open up and read a guide Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age. Kinds of book are a lot of. It means that, science book or encyclopedia or other individuals. So , how do you think about this guide?

Perry Payne:

Here thing why this particular Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age are different and reputable to be yours. First of all reading through a book is good nevertheless it depends in the content from it which is the content is as delightful as food or not. Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age giving you information deeper and in different ways, you can find any guide out there but there is no publication that similar with Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age. It gives you thrill examining journey, its open up your own eyes about the thing in which happened in the world which is possibly can be happened around you. It is easy to bring everywhere like in area, café, or even in your technique home by train. Should you be having difficulties in bringing the published book maybe the form of Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age in e-book can be your substitute.

Gordon Woods:

The book Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age has a lot info on it. So

when you make sure to read this book you can get a lot of help. The book was published by the very famous author. The writer makes some research before write this book. That book very easy to read you may get the point easily after scanning this book.

Ethel Swafford:

Exactly why? Because this Dealers of Lightning: Xerox PARC and the Dawn of the Computer Age is an unordinary book that the inside of the book waiting for you to snap that but latter it will distress you with the secret that inside. Reading this book beside it was fantastic author who also write the book in such awesome way makes the content inside easier to understand, entertaining method but still convey the meaning fully. So , it is good for you because of not hesitating having this nowadays or you going to regret it. This phenomenal book will give you a lot of rewards than the other book possess such as help improving your proficiency and your critical thinking way. So , still want to delay having that book? If I were you I will go to the reserve store hurriedly.
